Introduction

Impact Essex County is an initiative of the Essex County Community Foundation (ECCF) that uses Community Indicators as measurements of social, environmental and economic factors that affect a community’s quality of life. The Impact Essex County website is aimed at creating a holistic picture of Essex County to deepen knowledge and understanding of our community and its local areas.

The data and analysis of 100 indicators on this website serves as a common source of information on critical topics that affect progress in Essex County. The metrics tracked will inform not only ECCF but also all community stakeholders to facilitate collaboration within Essex County and monitor the impact of collective efforts.

Impact Essex County was developed with assistance from the Center for Governmental Research (CGR), based in Rochester, New York. CGR is a nonprofit research and consulting firm that has been delivering expert support to the public, nonprofit and private sectors for over a century. CGR has developed community indicator projects across New York, Tennessee, Florida and Delaware.

This project includes data for local areas within Essex County and for three comparison counties wherever available. The comparison counties are Middlesex County, MA, Westchester County, NY and Lake County IL. These counties are similar to the Essex County in key areas, including being part of a larger metropolitan region, having both wealthy areas and pockets of poverty, and sharing some demographic characteristics, such as a highly educated population.

These points of comparison provide context and a reference point for looking at and interpreting Essex County’s data. As much as the areas are alike, they also have different factors and characteristics impacting them. Our intention is not to rank the areas or put them in competition with one another, but to provide a frame of reference for making meaning out of Essex County’s data.
Overview

2020 was an unprecedented year, with the coronavirus pandemic and rising awareness of racial injustice commanding attention at the national, state and local levels. The data in this report for the most part does not reflect the impact of the pandemic, as it was released during 2020. However, this report has been expanded to place a new focus on racial equity and to provide additional context for the racial disparities we report.

In a new Racial Equity section of the Impact Essex County website, we discuss how historic and current policies shaped the systems and structures that continue to produce wide disparities in indicators of well-being for different racial and ethnic groups.

These historic and current policies, practices and systems include housing policies that restrict access to people of color, employment discrimination, unequal access to financial services and capital, education systems that fail to equitably educate all students, racism in health care delivery, racial profiling and inequitable sentencing in policing and criminal justice and many others. Inequities have compounded over generations, impacting decades of family members. This is significantly illustrated by the redlining practices of the 1930s that blocked Black people and people of color from securing real estate, leaving them unable to benefit from a critical opportunity to create and transfer wealth across generations.

In our county of more than 780,000 people, many are impacted. While Essex County is 80% white, our population includes about 31,000 African Americans (4%), 27,000 Asians (3%), and 22,500 people (3%) who identify as being of two or more races. In addition, people of Hispanic heritage (which is considered by the U.S. Census to be an ethnicity, rather than a race) make up 20% of our residents, or close to 160,000 people.

While much of Essex County is thriving, there are pockets of poverty, economic struggle, low student achievement and unequal access to resources including jobs and transportation. These disparities impact people of color and geographic areas such as the Cities of Lynn and Lawrence.

The challenges facing local areas like Lynn and Lawrence higher rates of lead exposure among young children and lack of access to transportation. Nearly a quarter of residents in those cities do not have a vehicle, which makes it more difficult to get to jobs, educational opportunities and other services.

Though the poverty rate for the county overall is low (10.4%), Essex County is an expensive place to live, and it can be particularly tough for single parents with children. A living wage model suggests a single parent of 2 needs more than $85,000
to afford basic necessities - far above the actual median incomes for single-parent households. Nearly 30% of all county residents have incomes between 100% and 299% of the poverty level – incomes that may not be high enough for a comfortable living. Homes are expensive, with a median value of $409,900. Owning a home is out of reach for some populations; homeownership rates are quite low for African Americans and Hispanics at 33% and 29%, respectively.

Essex County has many incredible assets as well - proximity to the ocean, significant open space (22% of all land in the county is protected), and rich historic and artistic institutions and communities. Job growth in the County has matched the national level, high-paying sectors like Financial Activities are growing, and average salaries are high. Lynn and Lawrence have historically been magnets for immigrants and today boast some of the county’s most diverse neighborhoods.

Below please find summaries of trends across topics ranging from Demographics to Economy and Workforce to Education to Health.
Demographics

Essex County is home to 789,000 residents, with small but fast-growing minority groups, a high proportion of foreign-born residents in some local areas, and an overall aging population. Demographic trends are important to understand because they impact the economy, health care needs and outcomes, what services government and nonprofits provide, and many other local and national concerns.

Essex County is composed of 34 cities and towns, including the cities of Lynn, Lawrence, Amesbury, Beverly, Gloucester, Haverhill, Methuen, Newburyport, Peabody and Salem. Lynn, Lawrence, Haverhill, Methuen, Peabody and Salem are considered Gateway Cities. Gateway Cities are targeted for increased state investment and have below average incomes and adult education levels and populations between 35,000 and 250,000. Though Lynn, with 94,300 people, and Lawrence, with 80,000, are the largest localities in Essex County, they are not the fastest growing. Lynn’s population has grown 6% since 2000 and Lawrence’s 11%, outpaced by growth in smaller towns such as Middleton, Salisbury and Georgetown.

Lynn and Lawrence are two centers of diversity and immigration, with foreign-born residents making up 37% of Lynn’s population and 41% of Lawrence’s. Lawrence is also home to 64,000 of the county’s 164,000 Hispanic residents. In 2015-19, 78% of Lawrence residents speak a language other than English at home. Immigration has historically been a key driver of population growth throughout the U.S. and is projected to be increasingly important in the next several decades.

The county’s population overall has grown 9.1% since 2000, similar to the state but below the national rate of growth (17%). Growth was fastest among Hispanic residents (105%), African Americans (78%) and Asians (59%), though the county as a whole remained majority white (79%).

Overall, 17% of the county’s population was foreign-born and 26% spoke a foreign language at home – comparable with state and national rates and a bit below rates in some otherwise similar counties.

Among both sexes, older age brackets have grown more than younger ones since 2000, in line with America’s overall “graying” trend. Among men, the greatest increases were in the age brackets of 60-84 (52%) and 85 or older (78%), along with a 37% and 31% increase in the population of women, respectively. There were much smaller increases in the age brackets of 20-39 for men (2%). Both sexes had declines of 5% in the under 20 age bracket.

The age distribution of a population has major implications for what types of services are needed (schools, health care, etc.), and how they are delivered and paid for. It also
matters where people live – in Essex County, about 39% of people 65 or older in the county live alone, which can make it difficult to access services or care. In addition, 12% of Essex County’s population has some type of disability (both rates are similar to state and national rates).

Most households in Essex County are made up of singles living alone (28%) or married couples without children (28%), followed by married couples with children (20%), similar to state and national proportions. Although singles living with children made up just 11% of all households in Essex County, they accounted for 35% of all families with children under 18. That’s an increase from 27% in 2000, and rates were especially high among some groups (Hispanics – 63%, African Americans – 57%, whites – 37%, Asians – 27%). Female-headed single families made up 77% of the total. Children raised by single parents tend to be poorer and can be at risk for lower educational and life outcomes.

**Children and Youth**

More children in Essex County are living in poverty, but fewer are exposed to damaging lead and teen births have fallen dramatically. The available data paint a mixed picture of how children and youth in the county are faring.

Children are set on a trajectory through life in their earliest years, and even before they are born. A healthy pregnancy has a better chance of resulting in a healthy, full-term baby. In Essex County, most pregnant women begin prenatal care in their first trimester, which is the first step toward good birth outcomes. However, the rates vary among racial and ethnic groups, with 83% of Asian mothers, 77% of white mothers, 75% of Hispanic mothers and 73% of African American mothers beginning care early. In addition to the disparities, these rates have not been rising in Essex.

Premature babies are at higher risk for a host of problems and delays. In Essex County in 2018, 10% of births were preterm, equal to state and close to national rates. Infant mortality, the death of babies before age 1, has declined from 4.9 per 1,000 live births in 2003-07 to 4.2 in 2014-18 (rates are five-year averages).

Lead is an especially powerful environmental toxin for babies and young children that can cause permanent damage to cognitive, physical and behavioral abilities. The rate of elevated lead levels in children has been falling, down 43% from 2010 to 2018, to 2.6 per 1,000 children.

Perhaps the greatest risk factor to children’s success is poverty. In 2015-19, 14% of Essex County children were living at or below the poverty level, up from 12% in 2000 but below the national rate of 19%. The cities of Lawrence and Lynn had higher rates,
27% and 21%, and poverty was greater among African American (24%) and Hispanic (26%) children.

As children grow up, some exhibit risky behavior. Teen births in Essex County have fallen by 69% since 2000 to 10 per 1,000 in 2019. This is somewhat higher than the state rate but below the national rate of 17 per 10,000. Youth arrests, in contrast, have fluctuated up and down over the past decade. In 2019, Essex County recorded 1,460 youth arrests, a rate of 18 per 10,000 youth age 10 to 24, similar to the state rate and above a similar county, Middlesex, MA (15). About 6% of young people between 16 and 19 are not in school or working – similar to the national rate of 7% but above the state rate (4%).

Community Life

Transportation, safety, amenities like the arts and the environment all contribute to the quality of life in Essex County. Available data show a lack of transportation options to be a major challenge, while crime has been declining.

The vast majority of residents of Essex County drive to work, with 79% driving alone to work and another 9% carpooling. A small, but increasing share of residents use public transportation or bike or walk to work. Slightly over 31,000 households in Essex County, comprising 11% of the county’s total, do not own a car. This is a lower rate than the state as a whole (at 12%), but still concerning given challenges with public transportation in the county. More than 1 in 5 households in Lawrence (24%) and Lynn (21%) were without cars.

In 2015-19, 86% of households in Essex County have access to the Internet, similar to the state and greater than the national rate of 83%. However, Internet access was considerably lower within certain communities in the region. In Lawrence, only 72% of residents had Internet access in 2015-19.

The crime rate in Essex County has declined slightly since 2008. In 2019, the rate of reported crimes against people was 7.4 per 1,000 residents, lower than the statewide rate of 9.3. More notably, the rate of crimes against property was 15 per 1,000 residents in 2019, down from 30 in 2008 and a 7% decline from 2018. The rates of crimes against people and crimes against property in Essex County are a bit lower than the statewide rates, and slightly above the figures in Middlesex County.

At 0.8 arrests per 1,000 residents, the drug-related arrest rate in Essex County in 2019 was similar to the statewide rate of 0.9 during the same year, while Lynn was almost double the rate (1.3).
The rate of reported *victims of domestic violence* in Essex County in 2019 was 3.1 per 1,000 residents, similar to the prior year. While lower than the statewide figure, the rate of domestic violence in Essex County has been higher than the rate in Middlesex County.

In 2018, an average of 19 residents per 10,000 were *incarcerated* in Essex County, greater than the statewide rate of 14, and over 3 times greater than Middlesex County. The *recidivism rate* in Essex County declined, among inmates released in 2015, 34% returned to prison within 3 years, down from 42% of inmates released in 2009. The decline in Essex County matches a statewide figure over the same time period.

*Voter participation* was 51% in the 2018 elections. The turnout rate in 2018 was higher than previous midterm elections since 2000. Voter participation in the county over the past two elections is similar to Middlesex County and a bit higher than the statewide figure.

In 2018, Essex County *residents contributed* 1.0% of their income to charitable organizations, lower than the state and national charitable donation rates of 1.7% each.

Over $1 billion was *spent on travel and tourism* in Essex County in 2018, good for $1,300 per county resident. This was an 18% increase for the county since 2006. Essex County’s increase since 2006 was slightly higher than Middlesex and similar to the State’s.

In 2019, 90% of days with air quality measurements in Essex County were categorized as *good air days*, slightly higher than the rate in 2018 and a 22 percentage point increase from 2000. Still, Essex County lags behind Middlesex County (93%) in terms of air quality.

## Economy and Workforce

Essex County’s economy has rebounded to a degree from the depths of the national recession of 2008-09 and several key sectors are gaining jobs, but salaries have only kept pace with inflation.

Total jobs increased 21% from 2001 to 2019 to 475,000. That rate of growth is similar to the state, a bit lower than the nation and above two of Essex County’s comparable counties.

Growing sectors in Essex County include Financial Activities, which increased 70% in total jobs from 2001 to 2019, Healthcare and Social Assistance (53%) and Leisure and Hospitality (37%) sectors. The biggest decline among major sectors was in
Manufacturing, where jobs fell 30%. Trends in Essex County were very similar to statewide and national trends, as well as to comparable counties.

The largest sectors in Essex County were very similar to the state and nation: 15% of total jobs were in Health Care and Social Assistance and 17% in Trade, Transportation and Utilities, 14% in Professional and Business Services, 10% in Leisure and Hospitality and 9% in each of the following: Financial Activities, Government, and Manufacturing.

The highest paid sector in Essex County was Manufacturing, with an average annual salary of $94,700 in 2019. This was followed by Financial Activities ($92,900) and Professional and Business Services ($91,000). The lowest paid sector was Leisure and Hospitality ($24,800). This was a bit different from the state and nation, where the Financial Activities ($147,400 and $98,300, respectively) and Information sectors ($122,600 and $115,600, respectively) that were the two highest earning sectors.

Overall, yearly salaries in Essex County averaged $61,800 in 2019 and increased 6% from 2000 after adjusting for inflation. This is in contrast to the state, where the average salary has increased by 15% and the nation, with a 13% increase over the same time period. (All financial data is presented in real terms.)

From 2000 to 2019, salaries grew fastest in Essex County in the Financial Activities (43%), Government (23%) and Manufacturing (19%) sectors, while the Information sector had the largest decrease (-8%). Although Essex County, the state and nation had similar changes in many sectors, the state and nation both had increases in average salaries in Information of 23% and 36% respectively.

In Essex County, as in the state and nation, women’s earnings tended to lag men’s earnings in the same occupations. For all occupations, Essex County women earned 80% of men’s earnings.

Like the state and nation, Essex County’s economy is dominated by small employers. In 2018, over half (54%) of businesses in Essex County employed 1-4 people, 19% employed 5-9 people, 12% employed 10-19 people and the remaining 15% employed 20 people or more. Only 3% of employers, less than 500 businesses, had 100 or more employees. This has not changed substantially since 2000.

Self-employment in Essex County brings in more revenue per resident than for the nation as a whole. Essex County had about $7,300 in self-employment revenue per resident in 2018, above the state and over $900 higher per resident that the nation. Essex County’s level was up 3% since 2000.

Unemployment in the county fell to 3.0% in 2019, a continuation of the steady decline in unemployment rates since the peak of 8.7% in 2009 and similar with the state, and
below the nation and comparable counties except Middlesex which was 2.3%. However, Essex County’s unemployment is still nearly twice the low of 2.7% in 2000.

In 2015-19, unemployment was higher among Hispanic and African American residents at about 6% and 8% than among Asian and white residents, similar to the disparities seen at the state and national levels.

In 2018, around 115,300 workers (44%) entered Essex County for work each year, and 174,100 residents (54%) left for work each year.

**Education**

In Essex County as in much of the nation, the available data about education paints a picture of stark disparities – concentrated groups and communities with low test scores, graduation rates, and low education levels among adults, against state and regional of statistics of high-achieving students, schools and adults.

Educational success hinges upon myriad factors, but important ones include prekindergarten participation, school attendance and the adequacy of school funding. Prekindergarten helps prepare children both socially and academically for school, and can be especially important for low-income children who tend to be exposed to a less rich vocabulary and have access to fewer resources than their peers. In Essex County in 2019, 43% of 4-year-olds were enrolled in public or private prekindergarten programs, up from 36% in 2002.

School attendance is increasingly measured by the share of students who miss 10% or more of the school year and are deemed “chronically absent.” In 2019, 15% of students were chronically absent in Essex County, the similar to the state rate and little changed since 2009. But some local districts had rates near or above 20%, including Haverhill, Lawrence, Methuen, and Salem.

**School spending** in Essex County across public school districts was $16,000 per student in 2018, slightly less than the statewide level of $16,800 and below the level in Middlesex, MA of $17,700. Spending in Essex County has increased 13% since 2008, after adjusting for inflation. The highest spending districts in Essex County were some of the vocational schools, with per-student spending levels at or above $20,000.

**Enrollment in higher levels of schooling** favors females, with women making up 56% of undergraduate college students and 63% of students in graduate and professional schools in Essex County. These disparities are similar to the state and national levels.

Measures of academic achievement show the majority of students in Essex County are considered proficient in key subjects, but many are not. Disparities in academic
achievement remain significant, though some groups have made considerable progress over the last decade.

Third grade is an important milestone, particularly in the development of students’ literacy skills. Through third grade, many students are learning to read; from third grade on, they need to be able to read to learn. In Essex County in 2019, 55% of 3rd graders were considered proficient on the state’s English Language Arts exams, up 5 points from the previous year.

Proficiency was lower among economically disadvantaged students (39%), Hispanic students (40%) and African American students (44%) compared with those who were not disadvantaged (65%) and white and Asian students (63% and 69%, respectively).

Similarly, 8th grade is an important benchmark for the development of math skills, as students are studying or will soon move into study of algebra and other high school-level math courses. In 2019, 45% of Essex County 8th graders were considered proficient on the state’s math exam. But on this exam as well, rates were lower among some groups: 26% among economically disadvantaged students and 29% among Hispanic students and 28% among African American students.

Massachusetts requires students to pass 10th grade level state tests in math and English in order to graduate. In 2019, 57% of 10th graders passed the state’s language arts exam and 55% passed the math exam. Disparities were less pronounced on the English exam, with 35% of economically disadvantaged students, 34% of Hispanic students and 42% of African American students passing in 2019.

High school graduation rates in Essex County have been rising, with 87% of the 2015 cohort graduating in 2019, up 10 percentage points from 2006 and similar to the state graduation rate. Thirteen districts in the county had graduation rates of 95% or higher. The lowest graduation rates were in the high-poverty districts of Lawrence (71%) and Lynn (75%). Lawrence, however, had the largest gain since 2006, with a 30-point increase.

Students from low-income backgrounds graduated at a somewhat lower rate 79% in 2019, though that was up from 61% in 2006. While 96% of Asian students and 94% of white students in the 2015 cohort graduated in 2019, rates were somewhat lower among African American and Hispanic students (86% and 76%). These disparities were comparable to rates at the state level among the same groups.

Essex County is a highly educated county in terms of the adult population, with 40% of adults in 2015-19 having at least a bachelor’s degree, up from 31% in 2000. That is above the national rate (32%) but below Massachusetts’ rate of 44% and below the rates in comparison counties: 56% in Middlesex, MA, 49% in Westchester, NY, and 45% in Lake, IL.
Some parts of Essex County and some groups within Essex County were significantly less well educated. In the cities of Lawrence and Lynn, just 11% and 19%, respectively, of adults had at least a bachelor’s. And throughout the county, only 12% of Hispanic residents had a bachelor’s or higher degree.

Financial Self-Sufficiency

Despite generally low poverty rates, Essex is an expensive county that requires a level of income that data suggests many residents and families lack.

In 2015-19, 11% of Essex County residents had incomes at or below the poverty level, the same as the state rate and less than the national level of 13%. Median incomes in Essex County were generally 15-30% higher than national levels as well, depending upon the group.

But Essex County has pockets of poverty and stark disparities among racial and ethnic groups. In the cities of Lawrence and Lynn, poverty rates are 21% and 17%. Countywide, 18% of African Americans and 22% of Hispanics were living in poverty, compared to 10% of Asians and 8% of whites.

Median household incomes are far higher for Asians and whites (in the $84,000-$106,000 range) than for African Americans and Hispanics ($48,000-$55,000). Single-parent households are particularly disadvantaged, with a median income for female-headed households with children of just $32,100.

Actual incomes are far below what is needed to make ends meet in Essex County for some residents and families. Living wages for a family of three with a single earner (a working parent and two children) would require an annual income of more than $85,000 in Essex County – far above the actual median income for either female- or male-headed households (which is $34,600 and $50,300 respectively).

In addition, the living wage model and income statistics suggest that a broader group of families may find it difficult to get by. A family of four with two earners (two working parents and two children) needs $91,000 annually, or nearly three times the poverty level, which is $24,900 for such a family. In Essex County, 64% of residents have incomes that are triple the poverty level, and 26% have incomes between 100% and 299% of poverty. While these statistics are not an exact match (mixing family and individual metrics), they do suggest that the cost of living in Essex County may push a broader group near the edge of self-sufficiency.

In terms of participation in programs to help needy individuals and families, Essex County has seen the biggest increase in the share of people receiving federal food assistance (SNAP). In 2015-19, 13% of households received SNAP benefits, with higher
levels in Lawrence (38%) and Lynn (27%). About 3.5% of Essex County households in 2015-19 received TANF (Temporary Assistance for Needy Families), largely unchanged from 2000 and higher than the state and nation.

About 13% of residents filed for the Earned Income Tax Credit, which provides tax credits or refunds to working poor. That was a bit higher than the state and lower than the nation, likely reflecting that incomes in Essex County are above national incomes.

In 2020, 36% of Essex County students were economically disadvantaged, up from 28% in 2015. Here too, Essex County was above the state rate (33%).

A lack of financial self-sufficiency shows up in Essex County’s statistics on homeownership and housing affordability.

Home values in Essex County have risen by 29% since 2000, and at $409,900, the median home value in the county in 2015-19 was higher than both the state and the nation. This is good for homeowners, but the rising costs of homeownership can make it difficult for residents to purchase their first home. Housing affordability for homeowners, as determined by the ratio of median home value to median household income, shows that homeownership is becoming increasingly unaffordable in the county, with the value of homes rising faster than household incomes.

The same is true for renters in Essex County, who spent 38% of their household income on rent in 2015-19, similar to the state level, and higher than renters nationwide (31%).

Homelessness is a growing issue in Essex County, with 12 homeless persons per 10,000 residents in 2019. The rate also increased in Massachusetts over this time span from 24 to 27. Nationwide, homelessness has decreased from 21 to 17 per 10,000 residents over the same period of time.

The homeownership rate in Essex County has remained steady since 2000. In 2015-19, 64% of all homes were owner-occupied, the same rate as 2000. Despite this consistency, homeownership rates vary greatly among local areas. Only 31% of homes in Lawrence were owner-occupied in 2015-19, along with 45% in Lynn and 52% in Salem. By contrast, the homeownership rates in Boxford, Topsfield, and West Newbury were over 90%. Essex County has greater racial and ethnic disparities in homeownership than the nation. In 2015-19, 69% of white residents and 66% of Asian residents owned their home, compared to 33% of African Americans and 29% of Hispanics. Nationwide, homeownership was higher among African American and Hispanic residents at 42% and 47% respectively.
Health

While health insurance is widespread in Essex County, as it is throughout Massachusetts, the county shares many of the same health concerns as the nation: obesity, diabetes, smoking, cancer and drug addiction. The opioid crisis has hit Essex County particularly hard, as evidenced by high rates of admissions for treatment and deaths from overdose.

Just 4% of Essex County residents under 65 in 2018 lacked health insurance, similar to the state but far below the national rate of 10%. Spending on medical care was $524 per member, per month in 2017, higher than 2016 and below the statewide level of $630.

While Essex County was not immune from any of the nation’s leading health-related problems, the area where it stood out was substance abuse. A national survey found rising rates of illegal drug use that were somewhat higher in the county (20% of adults and 16% of youth said they used an illegal drug in the last 30 days) than in the nation. And the rate of drug overdose deaths in Essex County, 35 per 100,000 residents, was higher than the national rate of 21.

State data on treatment admissions shows the growing problem of heroin. While total admissions rose 15% from 2008 to 2017 to nearly 10,600, admissions primarily due to heroin while several other categories declined. By 2017, heroin and other opioids were responsible for 55% of admissions, up from 45% in 2008. Essex County’s rate of admissions, 135 per 10,000 residents, was below the state rate of 144 but far higher than the Middlesex County rate of 78.

In other areas of behavioral health and general health, Essex County more closely mirrors other areas:

- About 15% of adults smoke.
- About 4.5% report suffering from mental illness.
- The suicide rate of 0.9 deaths per 10,000 residents reflects an increase from 53 in 2000 to 75 in 2018, but the rise was not steady.
- About 63% of adults and 35% of children were overweight or obese.
- The overall mortality rate has been declining, falling 15% since 2000.

Essex County had relatively high rates in a few other areas:

- The rate of newly identified diabetes cases was 67 per 10,000 in 2017, far higher than the state and two of the three comparison counties.
The rate of new cancers was slightly higher than the state, nation and two of the three comparison counties.

Racial Equity

Systemic racism is a global, national and local issue, underlying and amplifying many of our most critical social challenges. As detailed in the sections above, we observe racial and ethnic disparities in the data across topics ranging from Children & Youth to Economy & Workforce to Education to Financial Self-Sufficiency.

The disparity data reflects the effects of centuries of structural racism in America, starting with the simultaneous genocide of indigenous peoples and enslavement of Africans and moving through the development and institutionalization of racist ideology and policies impacting nearly every facet of life in this country. In the United States, long-standing and far-reaching structural systems have been created and sustained over centuries to hinder access to economic, educational and social opportunities for people of color and their families, while also facilitating greater access to those opportunities for White people and their families.

These historic and current policies, practices and systems include housing policies that restrict access to people of color, employment discrimination, unequal access to financial services and capital, education systems that fail to equitably educate all students, racism in health care delivery, racial profiling and inequitable sentencing in policing and criminal justice and many others. These inequities have compounded over generations, impacting decades of family members. This is significantly illustrated by the redlining practices of the 1930s that blocked Black people and people of color from securing real estate, leaving them unable to benefit from a critical opportunity to create and transfer wealth across generations.

In our county of more than 780,000 people, many are impacted. While Essex County is 80% white, our population includes about 31,000 African Americans (4%), 27,000 Asians (3%), and 22,500 people (3%) who identify as being of two or more races. In addition, people of Hispanic heritage (which is considered by the U.S. Census to be an ethnicity, rather than a race) make up 20% of our residents, or close to 160,000 people.

We recommend the following resources to learn more about structural racism: The New Jim Crow by Michelle Alexander (https://newjimcrow.com/), Isabel Wilkerson’s Caste: The Origins of Our Discontents, The Color of Law by Richard Rothstein and Stamped from the Beginning by Ibram X. Kendi. There are also data resources such as the National Equity Atlas; racial equity-focused research from organizations like
the Urban Institute; tools for learning and change such as those available at Racial Equity Tools, and personal narratives from writers such as Ta-Nehisi Coates.
